INSTRUCTIONS

1. THIS PAPER CONSISTS OF TWO (2) SECTIONS: SECTION 1 – MULTIPLE CHOICE AND SECTION 2 – ESSAY QUESTIONS.

2. READ QUESTIONS AND INSTRUCTIONS CAREFULLY.

3. ANSWER ALL QUESTIONS IN SECTION ONE (1).

4. CHOOSE THREE (3) QUESTIONS IN SECTION TWO: QUESTION ONE (1) IS COMPULSORY

5. EACH QUESTION IS TO BE ANSWERED ON A SEPARATE SHEET OF PAPER.

THIS PAPER IS NOT TO BE OPENED UNTIL THE INVIGILATOR HAS GRANTED PERMISSION.
SECTION 1
MULTIPLE CHOICE QUESTIONS

Instructions: For each of the following questions/statements, write CLEARLY the letter that corresponds with the most appropriate answer, e.g. 1. B

1. The following are common abnormalities of the mouth EXCEPT
   A. Leukoplaikia
   B. Darwin’s tubercle
   C. Canker sore
   D. Herpes simplex

2. Stensen’s ducts are located on the ___________________________
   A. Hard palate on the anterior
   B. Soft palate next to palatine tonsils
   C. Buccal mucosa across from the second lower molar
   D. Buccal mucosa across from the second upper molar

3. Which of the following is an indication for severe malnutrition in children?
   A. Copper red hair color
   B. Excessive weightlessness
   C. Pustules
   D. Folliculitis

4. A weak or absent femoral pulse during palpation indicates which one of the following conditions?
   A. Hypothermia
   B. Too much exercising
   C. Partial or complete venous occlusion
   D. Partial or complete arterial occlusion
5. Which of the following signs indicates discomfort in the upper calf on forced dorsiflexion?
   A. Psoas sign
   B. Homan’s sign
   C. Allen’s sign
   D. Obturator sign

6. Which one of the following conditions presents with spoon shaped nails in children?
   A. Chronic cyanosis
   B. Iron deficiency anemia
   C. Poor hygiene
   D. Paronychia

7. Which of the following arteries protect the feet and toes from arterial occlusion?
   i. Anterior tibial artery
   ii. Posterior tibial artery
   iii. Popliteal artery
   iv. Dorsalis pedis artery
   A. i only
   B. i and iv only
   C. ii and iv only
   D. ii and iii only

8. A test that is appropriate to determine the backward filling of the superficial veins in the legs is called ________________
   A. Homan’s sign
   B. Allen
   C. Trendelenburg
   D. Manual compression

9. Which of the following tests evaluates the potency of the ulnar and the radial arteries?
   A. Trendelenburg
   B. Horxan’s sign
   C. Manual compression
   D. Allen
10. The following are major divisions of the brain EXCEPT
   A. Spinal cord
   B. Brain stem
   C. Cerebrum
   D. Cerebellum

11. Which lobe of the following cerebral hemispheres influences the ability to read with understanding?
   A. Temporal
   B. Frontal
   C. Occipital
   D. Parietal

12. Which of the following lobes contains the Broca’s area which is responsible for speech?
   A. Temporal
   B. Frontal
   C. Occipital
   D. Parietal

13. Diaphoresis may occur in which of the following conditions?
   i. Hypotension
   ii. Dehydration
   iii. Fever
   iv. Hyperthyroidism
      A. i, ii & iv
      B. i, iii, iv
      C. ii, & iii
      D. iii & iv

14. A clammy skin is typical in which of the following conditions?
   A. Hypotension
   B. Dehydration
   C. Fever
   D. Hyperthyroidism
Match each of the following conditions with the correct corresponding characteristics e.g. 26.

A. NOTE: There is only one (1) answer for each question.

Total: 20 Marks
SECTION 2

SHORT ESSAY QUESTIONS

Instructions: In this section answer only three (3) questions. Question 1 is compulsory. Then choose any other two questions. Each point carries 1 mark.

Question 1

Situation: Mrs Diamini is 89 years old and comes to your clinic complaining of persistent pain in the back. On examination, you observe that Mrs Diamini leans forward towards you during the interview.

Question A and B relate to the above situation

A. Discuss any five (5) points you will consider when communicating with Mrs Diamini during the interview.

B. State the importance of collecting the following biographic data in Mrs Diamini: (10)

- Name
- Age
- Address
- Gender
- Marital status
- Religious practices
- Educational level
- Occupation
- Significant others
- Nationality

Total: 20 Marks
Question 2

Situation: You are caring for Mr Mlotsa who is 38 years old in Ward 12. Mr Mlotsa reports severe headache and sensitivity to light after a head injury. The physician suspects meningeal inflammation and requests you to assess the client.

Question A - C relate to the above situation

A. Discuss how you will assess Mr Mlotsa's neck mobility to rule out the meningeal inflammation (5)
B. Discuss how you will assess Kernig’s sign in Mr Mlotsa (5)
C. Describe how you will use the reflex hammer when assessing Mr Mlotsa for deep tendon reflexes (10)

Total: 20 Marks

Question 3

Situation: A client visits your clinic with complaints of painful neck and chronic headache. He gives a history of insomnia. Upon examination you note moderate swelling in his cervical nodes. Question A and B relate to the situation.

A. Explore the client’s complaint “headache” by asking questions with rationale using the COLDSPA mnemonic. (14)
B. State any three (3) things you will note when palpating the lymph nodes in this client and explain possible abnormal finding in each. (6)

Total: 20 Marks
Question 4

A. Describe the two (2) normal heart sounds and state where they are best heard in the praerordium (4)

B. Describe how to palpate the carotid arteries in a client (3)

C. Describe the technique for palpating the apical impulse (3)

D. State any two (2) body parts used when inspecting for cyanosis (2)

Situation: An adolescent boy is being seen in the health clinic for epistaxis. He states that his nose has been bleeding “on and off” for several days. He also reports frequent use of cocaine.

E. Describe how you will inspect the clients’ internal nose using an otoscope (4)

F. State any four (4) possible abnormal findings that you may elicit during your inspection of the client’s internal nose (4)

Total: 20 Marks
