

**UNIVERSITY OF SWAZILAND****FINAL EXAMINATION 2005**

---

**TITLE OF PAPER:                   ADVANCED                   INORGANIC  
  CHEMISTRY**

**COURSE NUMBER:                C401**

**TIME ALLOWED:                 THREE (3) HOURS**

**INSTRUCTIONS:                THERE ARE SIX (6) QUESTIONS.  
  ANSWER ANY FOUR (4) QUESTIONS.  
  EACH QUESTION IS WORTH 25  
  MARKS.**

---

**A PERIODIC TABLE HAS BEEN PROVIDED WITH THIS  
EXAMINATION PAPER.**

**PLEASE DO NOT OPEN THIS PAPER UNTIL AUTHORISED TO  
DO SO BY THE CHIEF INVIGILATOR.**

## QUESTION ONE

- (a) Determine the specified quantity on the basis of the 18-electron rule:
- The number of CO ligands in  $[(\eta^5\text{-C}_5\text{H}_5)\text{W}(\text{CO})_x]_2$  having W-W single bond.
  - The identity of the first-row transition metal in  $(\eta^4\text{-C}_8\text{H}_8)\text{M}(\text{CO})_3$ .
  - The expected charge on  $[(\text{CO})_3\text{Ni-Co}(\text{CO})_3]^z$ . [3]
- (b) Sketch the structures of the following compounds, given that the central metal atoms obey the 18-electron rule.
- $(\eta^3\text{-C}_3\text{H}_5)\text{Mn}(\text{CO})_4$
  - trans*-bis[tetracarbonyl(triphenylphosphine)manganese(0)] [4]
- (c)  $\text{NaMn}(\text{CO})_5$  reacts with  $\text{H}_2\text{C}=\text{CHCH}_2\text{Cl}$  to give **A** + **B**. Compound **A** obeys the 18-electron rule and shows protons in three distinct magnetic environments. Water-soluble compound **B** reacts with aqueous  $\text{AgNO}_3$  to give a white precipitate that turns gray on exposure to light. When heated, **A** gives off gas **C** and converts to **D**, which has two distinct magnetic environments. Identify compounds **A** to **D**. [4]
- (d) Predict reasonable products for the following reactions:
- $(\eta^4\text{-C}_6\text{H}_6)\text{Fe}(\text{CO})_3 + \text{PPh}_3 \rightarrow$
  - $\text{Cr}(\text{CO})_6 + \text{CH}_2=\text{CH}-\text{CH}=\text{CH}_2 \rightarrow$
  - $\text{Co}(\text{CO})_3(\text{NO}) + \text{PPh}_3 \rightarrow$
  - $\text{Mo}(\text{CO})_6 + (\text{CH}_3)_2\text{PCH}_2\text{CH}_2\text{P}(\text{Ph})\text{CH}_2\text{CH}_2\text{P}(\text{CH}_3)_2 \rightarrow$
  - $\text{H}_3\text{C-Mn}(\text{CO})_5 + \text{SO}_2 \rightarrow$  (no gases are evolved) [10]
- (e) For each of the following sets, which complex would be expected to have the highest C-O stretching frequency? Explain.
- $\text{Fe}(\text{CO})_4(\text{PF}_3)$ ,  $\text{Fe}(\text{CO})_4(\text{PCl}_3)$ ,  $\text{Fe}(\text{CO})_4(\text{PMe}_3)$
  - $[\text{Re}(\text{CO})_6]^+$ ,  $\text{W}(\text{CO})_6$ ,  $[\text{Ta}(\text{CO})_6]^-$  [4]

### QUESTION TWO

- (a) On the basis of cluster valence electron count, predict the structures of the following species:  
 (i)  $\text{Fe}_5\text{C}(\text{CO})_{15}$   
 (ii)  $\text{Ni}_5\text{Os}(\text{CO})_{14}$  [4]
- (b) Based on isolobal analogies, choose the organometallic fragments that might replace  
 (i)  $\text{CH}_2^+$   $\text{Fe}(\text{CO})_4$ ,  $\text{Mn}(\text{CO})_5$ , or  $\text{Re}(\text{CO})_4$   
 (ii)  $\text{CH}^-$   $\text{Ni}(\text{CO})_3$ ,  $\text{Co}(\text{CO})_3$ , or  $\text{Mn}(\text{CO})_4$   
 (iii)  $\text{CH}_3$   $(\eta^5\text{-C}_5\text{H}_5)\text{Co}(\text{CO})$ ,  $\text{Mn}(\text{CO})_5$ , or  $\text{Cr}(\text{CO})_6$  [3]
- (c) Use Wade's rules to predict the structures of the following:  
 (i)  $\text{Ru}_6\text{C}(\text{CO})_{17}$   
 (ii)  $[\text{Rh}_7(\text{CO})_{16}]^{3-}$   
 (iii)  $\text{Fe}_4\text{C}(\text{CO})_{13}$  [6]
- (d) Consider the polynuclear carbonyl hydride complex,  $\text{H}_2\text{Os}_3(\text{CO})_{10}$   
 (i) Write down the equation for the formation of this species.  
 (ii) From the application of the 18-electron rule, comment on the structure of this molecule.  
 (iii) Compare the reactivity of this molecule to that of the complex  $\text{Os}_3(\text{CO})_{12}$ . [6]
- (e) Account for the observation that only a single carbonyl stretching band is observed for the ion  $[\text{Co}(\text{CO})_3(\text{PPh}_3)_2]^+$ . [3]
- (f) Consider the following species:  
 (i)  $\text{NiNO}$  (ii)  $(\eta^5\text{-C}_5\text{H}_5)\text{Ni}$  (iii)  $\text{BF}$   
 With which of these species are  $\text{CO}$ ,  $\text{Co}(\text{CO})_2$  and  $(\eta^6\text{-C}_6\text{H}_6)\text{Co}$  isoelectronic so far as valence electrons are concerned? [3]

### QUESTION THREE

- (a) (i) What is an "oxidative addition" reaction? Give an example.  
 (ii) What are the requirement(s) for such a reaction to occur?  
 (iii) What is the reverse reaction called? State three requirements on the complex that favour this reaction. [8]
- (b) (i) Propose a mechanism for the following reaction: [8]  

$$\text{R-CH=CH}_2 + \text{CO} + \text{H}_2 + \text{Co}_2(\text{CO})_8 \rightarrow \text{RCH}_2\text{CH}_2\text{CHO}$$
  
 (ii) Give electron counts for all the species postulated to be involved in the catalytic cycle for the reaction shown in (i) above. [4]  
 (iii) Kinetic studies indicate that the hydroformylation reaction rate is enhanced by an increase in  $\text{H}_2$  pressure and inhibited by an increase in  $\text{CO}$  pressure. How is the mechanism in the above cycle consistent with these observations? [5]

### QUESTION FOUR

- (a) Discuss the steady decrease in ionic size of the  $\text{Ln}^{3+}$  ions across the period. [5]
- (b) (i) Why are the colours of  $\text{Ln}^{3+}$  ions less intense than those of the first-row transition metal ions? [3]
- (ii) Which  $\text{Ln}^{3+}$  ions would you expect to show the same colour as  
 (1)  $\text{Eu}^{3+}$                       (2)  $\text{Pr}^{3+}$                       (3)  $\text{Dy}^{3+}$                       [3]  
 Explain. [2]
- (iii) Why are  $\text{Eu}^{2+}$  and  $\text{Yb}^{2+}$  somewhat more stable with respect to oxidation than other  $\text{Ln}^{2+}$  cations? [3]
- (c) (i) Determine the number of unpaired electrons in  $\text{Er}^{3+}$ . [1]
- (ii) Derive the ground state term symbol for  $\text{Er}^{3+}$ , and calculate its magnetic moment. [6]
- (iii) Write the symbols of two lanthanide metal ions whose magnetic moments can be calculated by the spin-only formula. [2]

### QUESTION FIVE

- (a) Predict the products of the following reactions of interhalogens:  
 (i)  $\text{IF}_5 + \text{CsF} \rightarrow$   
 (ii)  $\text{ClF}_3 + \text{H}_2\text{O} \rightarrow$   
 (iii)  $\text{BrF}_5 + \text{F}_2 \rightarrow$  [3]
- (b) The structure of  $\text{I}_3^-$  is highly sensitive to the identity of the counter-ion. Describe the structure of  $\text{I}_3^-$  in combination with  
 (i)  $[\text{N}(\text{CH}_3)_4]^+$   
 (ii)  $\text{Cs}^+$  [4]
- (c) Write the self-ionisation reaction for  $\text{ICl}$  and predict the structure for the anionic compound formed. [3]
- (d) Suggest an equation for the preparation of each of the following species and predict the structure of each of them.  
 (i)  $[\text{ICl}_4]^-$                       (ii)  $[\text{BrICl}]^-$  [6]
- (e) (i) Give two ways used to prepare actinide metals from actinide salts. [4]
- (ii) State the two factors on which the general methods for the preparation of synthetic actinides depend. [2]
- (iii) Using the reactor irradiation method, write down a sequence of nuclear reactions that will produce  ${}_{93}^{237}\text{Np}$  from  ${}_{92}^{235}\text{U}$  [3]

## QUESTION SIX

- (a) (i) For each of the following elements, identify one significant role in biological processes:
- (1) Mg [1]  
 (2) Co [1]  
 (3) K [1]
- (ii) Why are *d* metals such as Mn, Fe, Co, and Cu used in redox enzymes in preference to Zn, Ga, and Ca? [1]
- (iii) Metal ions in animals are often coordinated by nitrogen donor atoms. Give two examples of Nature's nitrogen ligands. [2]
- (b) Briefly discuss CO poisoning. [3]
- (c) Using the most appropriate acid-base theory, identify the acids and bases in the following reactions:
- (i)  $\text{SiO}_2 + \text{Na}_2\text{O} \rightarrow \text{Na}_2\text{SiO}_3$  [2]  
 (ii)  $\text{Cl}_3\text{PO} + \text{Cl}^- \rightarrow \text{Cl}_4\text{PO}^-$  [2]  
 (iii)  $\text{BF}_3 + 2\text{ClF} \rightarrow \text{Cl}_2\text{F}^+ + \text{BF}_4^-$  [2]
- (d) (i) Name three properties that determine the utility of a solvent. [3]  
 (ii) Predict whether the equilibrium constants for the following reactions should be greater than 1 (reaction lies to the right) or less than 1 (reaction lies to the left):
- (1)  $\text{CdI}_2 + \text{CaF}_2 \rightleftharpoons \text{CdF}_2 + \text{CaI}_2$  [2]  
 (2)  $[\text{CuI}_4]^{2-} + [\text{CuCl}_4]^{3-} \rightleftharpoons [\text{CuCl}_4]^{2-} + [\text{CuI}_4]^{3-}$  [2]
- (iii) Account for the trend in acidity:  
 $[\text{Fe}(\text{OH}_2)_6]^{2+} < [\text{Fe}(\text{OH}_2)_6]^{3+}$  [3]

# PERIODIC TABLE OF ELEMENTS

## GROUPS

| PERIODS | GROUPS                    |                           |                            |                           |                           |                            |                            |                            |                            |                            |                           |                           |                           |                           |                           |                           |                           |                           |  |
