

UNIVERSITY OF SWAZILAND  
BACHELOR OF SCIENCE

SUPPLEMENTARY EXAMINATION 2013

TITLE OF PAPER : PHYSICAL CHEMISTRY

COURSE NUMBER : C202

TIME : 3 HOURS

INSTRUCTIONS : THERE ARE SIX QUESTIONS

: ANSWER ANY FOUR QUESTIONS

: BEGIN THE ANSWER TO EACH QUESTION ON  
A SEPARATE SHEET OF PAPER

: DATA SHEETS ARE PROVIDED WITH THIS  
EXAMINATION PAPER

DO NOT OPEN THIS PAPER UNTIL THE INVIGILATOR INSTRUCTS YOU TO DO  
SO.

Question 1 [25 Marks]

- a) Many gases show nearly ideal behaviour at room temperatures and low pressures. Using a sketch of either an isotherm or compressibility factor 'z' for a real gas and that of an ideal gas, briefly explain how they compare at high densities, moderate densities, and at low densities. [10]
- b) A gaseous mixture in a 250 L container at 125°C contains 16.0g O<sub>2</sub> and 3.0 g H<sub>2</sub>. Assuming ideal gas behaviour calculate:
- (i) partial pressure of each gas [6]
  - (ii) total pressure [4]
  - (iii) partial pressure of each gas after the mixture has reacted to form water. [5]

Question 2 [25 MARKS]

- a) Using examples and/or diagrams compare and contrast Any Two of the following terms
- i) reversible and irreversible expansion [5]
  - ii) path and state functions [5]
  - iii) work and heat [5]
  - iv) change in internal energy and change in enthalpy [5]
- b) 2 moles of methane occupies 12 L at 310 K.
- i) Derive an expression for reversible isothermal expansion. [5]
  - ii) Calculate the work done when the gas expands isothermally against a constant external pressure of 200 torr until its volume has tripled. [5]
  - iii) Calculate the work that would be done if the same expansion in b(ii) occurred in a series of equilibrium steps . [5]

Question 3 [25 Marks]

- a) Write short notes on Any Three of the following concepts:
- i) Statistical view of entropy [5]
  - ii) Clausius inequality [5]
  - iii) Second law of thermodynamics [5]
  - iv) Third law of thermodynamics [5]

For each concept include the origin or a short derivation showing its origin, an example where applicable and the role or implication of each of the concepts in thermodynamics.

- b) Find  $\Delta_r H^\theta$  for the following reactions from standard enthalpies of formation:
- i)  $NH_3(g) + HCl(g) \rightarrow NH_4Cl$  [5]
  - ii)  $Cyclopropane(g) \rightarrow propene(g)$  [5]

Question 4 [25 Marks]

- a) (i) Calculate the enthalpy of formation of  $N_2O_5(g)$  from the following data: [9]
- $$2NO(g) + O_2(g) \rightarrow 2NO_2(g) \quad \Delta H^\theta = -114.1 \text{ kJmol}^{-1}$$
- $$4NO_2(g) + O_2(g) \rightarrow 2N_2O_5(g) \quad \Delta H^\theta = -110.2 \text{ kJmol}^{-1}$$
- $$N_2(g) + O_2(g) \rightarrow 2NO(g) \quad \Delta H^\theta = +180.5 \text{ kJmol}^{-1}$$
- (ii) Using the enthalpy of formation of  $N_2O_5(g)$  obtained from a(i) calculate the change in internal energy for the formation of  $N_2O_5(g)$  [6]
- b) (i) Derive Kirrchoff's equation: [4]
- $$\Delta H_r(T_2) = \Delta H_r(T_1) + \Delta_r C_p \Delta T$$
- (ii) Predict the standard enthalpy of reaction at  $100^\circ\text{C}$  for the reaction: [6]
- $$2NO_2(g) \rightarrow N_2O_4(g)$$

Refer to table and the data below:

	$C_p \text{ J mol}^{-1}\text{K}^{-1}$
$N_2O_4(g)$	77.28
$NO_2(g)$	37.20

Question 5 [25 Marks]

- a) Calculate the change in entropies of the system,  $\Delta S_{sys}$ , the surroundings,  $\Delta S_{surr}$ , and the total change in entropy,  $\Delta S_{tot}$ , when a sample of nitrogen gas of mass 14 g at 298 K and 1.00 bar doubles its volume in:
- an isothermal reversible expansion [6]
  - an irreversible isothermal expansion against an external pressure of 0.5 bar. [4]
- b) What would the change in entropy be if the gas in (a) was compressed to half its volume and simultaneously heated to twice its initial temperature? [5]
- c) If 50g water at  $80^\circ\text{C}$  is poured into 100g water at  $10^\circ\text{C}$  in an insulated vessel given that  $C_{p,m} = 75.5 \text{ JK}^{-1}\text{mol}^{-1}$ : Calculate:
- final temperature of the mixture [4]
  - the entropy change [6]

Question 6 [25 Marks]

- a) Derive the integrated Gibbs-Helmholtz equation [5]

$$\frac{\Delta G_2}{T_2} - \frac{\Delta G_1}{T_1} = \Delta H \left( \frac{1}{T_2} - \frac{1}{T_1} \right)$$

from the fundamental thermodynamic equation  $dG = VdP - SdT$

- b) Given the reaction:

Calculate the change in Gibbs free energy  $\Delta G^\theta$

- i) at 298K [5]  
ii) at 500K [5]  
iii) Comment on the significance of the values obtained in (i) and (ii). [2]

- c) For the reaction in (b) Calculate

- (i)  $\Delta_r H^\theta$  [3]  
(ii)  $\Delta U$  [3]  
(ii). Maximum expansion work,  $\Delta A$  all at 298 [2]
