

**UNIVERSITY OF SWAZILAND**  
**SUPPLEMENTARY EXAMINATION**  
**ACADEMIC YEAR 2013/2014**

---

**TITLE OF PAPER:**                    **INORGANIC CHEMISTRY I**

**COURSE NUMBER:**                **C301**

**TIME ALLOWED:**                **THREE (3) HOURS**

**INSTRUCTIONS:**                **THERE ARE SIX (6) QUESTIONS.**  
**ANSWER ANY FOUR (4) QUESTIONS.**  
**EACH QUESTION IS WORTH 25**  
**MARKS.**

---

**THE FOLLOWING HAVE BEEN PROVIDED WITH THIS EXAMINATION PAPER, AND ARE ATTACHED:**

1. Periodic Table
2.  $d^7$  Tanabe-Sugano Diagram
3. Character Table for  $C_{2h}$  point group
4. Table of some hard, soft and intermediate acids and bases
5. Decision Tree
6. Table of Constants

**PLEASE DO NOT OPEN THIS PAPER UNTIL AUTHORISED TO DO SO BY THE CHIEF INVIGILATOR.**

*"Marks will be awarded for method, clearly labelled diagrams, organization and presentation of thoughts in clear and concise language"*

### Question One

a) Give the IUPAC name for each of the following:

- i)  $\text{K}_3[\text{Co}(\text{NO}_2)_6]$
- ii)  $[\text{Co}(\text{en})_3][\text{Cr}(\text{Ox})_3]$
- iii)  $[\text{Cl}_3\text{W}(\mu\text{-Cl})_3\text{WCl}_3](\text{ClO}_4)_3$
- iv)  $\text{W}(\text{CH}_2\text{CH}_3)_6$

[8]

b) Give the formula of each of the following:

- i) Sodium pentacyanonitrosylferrate(II) dihydrate
- ii) Potassium pentachloronitrosmate(IV)
- iii) Tetraammineaquacobalt(III)- $\mu$ -cyanobromotetracyanocobaltate(III)

[6]

c) State the type of isomerism that may be exhibited by the following complexes, and draw structures of the isomers:

- i)  $[\text{Pt}(\text{en})_2\text{Cl}_2]^{2+}$
- ii)  $\text{Pd}(\text{bpy})(\text{NCS})_2$

[11]

### Question Two

a) Using hard-soft concepts, which of the following reactions are predicted to have an equilibrium constant greater than 1? Briefly explain each of your answers.

- i)  $\text{ZnO} + 2\text{BuLi} \rightleftharpoons \text{Zn}(\text{Bu})_2 + \text{Li}_2\text{O}$
- ii)  $\text{R}_3\text{PBr}_3 + \text{R}_3\text{NBF}_3 \rightleftharpoons \text{R}_3\text{PBF}_3 + \text{R}_3\text{NBBR}_3$
- iii)  $\text{CH}_3\text{HgI} + \text{HCl} \rightleftharpoons \text{CH}_3\text{HgCl} + \text{HI}$
- iv)  $[\text{AgCl}_2]^- + 2\text{CN}^-(\text{aq}) \rightleftharpoons [\text{Ag}(\text{CN})_2]^- + 2\text{Cl}^-$

[8]

b) The value of  $\mu_{\text{eff}}$  for  $[\text{CoF}_6]^{3-}$  is found to be 5.63 BM. Given that the complex contains a  $d^6$  Co(III) metal center, determine whether this value agrees with the value of magnetic moment calculated from the spin-only formula. If the two values are not in agreement, give a possible reason.

[6]

- c) Explain why under the influence of an octahedral field, the energies of the d orbitals are raised or lowered. With respect to what are orbital energies raised or lowered? [7]
- d) What is the expected ordering of  $\Delta_o$  for  $[\text{Fe}(\text{OH}_2)_6]^{2+}$ ,  $[\text{Fe}(\text{CN})_6]^{3-}$  and  $[\text{Fe}(\text{CN})_6]^{4-}$ ? Rationalize your answer. [4]

### Question Three

- a) Using only ethylenediamine ( $\text{en} = \text{H}_2\text{NCH}_2\text{CH}_2\text{NH}_2$ ) and bromide ions as ligands, construct a cationic octahedral complex of cobalt(III). Your complex cation should have +1 charge and it should be chiral. Draw a three-dimensional structure for this complex together with its mirror image. Then draw the structure of the diastereoisomer (i.e., achiral analogue) of the enantiomers you have drawn. [9]
- b) Consider the salt  $[\text{Co}(\text{bpy})_2(\text{CN})_2]^+[\text{Fe}(\text{bpy})(\text{CN})_4]^-$ .
- Give formulas of compounds that are coordination isomers of the salt
  - Draw two geometrical isomers arising from **only one** of the ions in the formula above
  - Draw two enantiomers arising from **only one** of the ions in the formula above

[16]

### Question Four

- a) Show the mechanisms that explain why the following reactions occur far more rapidly than would be true for simple substitution or ligand replacement:
- $[\text{Co}(\text{NH}_3)_5(\text{H}_2\text{O})]^{3+} + \text{NO}_2^-$
  - $[\text{Co}(\text{NH}_3)_5(\text{CO}_3)]^+ + \text{H}_3\text{O}^+$

[8]

- b) For a substitution reaction shown below, the rate of reaction is found to be first order in each of the two starting materials. Suggest a mechanism for the reaction.

[5]

- c) Complete and balance the following reactions:

[12]

### Question Five

- a) Consider adding an aqueous solution of ammonia to an aqueous solution of copper(II) sulphate. Initially, a pale blue precipitate is formed. Upon adding excess ammonia solution, the precipitate dissolves resulting in the formation of a deep blue solution. Use suitable equations to explain the above observations. [5]
- b) The electronic spectrum  $[\text{Co}(\text{H}_2\text{O})_6]^{2+}$ , a  $d^7$  complex, exhibits bands at 8100, 16000 and 19400  $\text{cm}^{-1}$ .
- Using the Tanabe-Sugano diagram provided, and assuming the complex has a high-spin electronic ground state, assign the electronic transitions to these bands (listed above)
  - Consider a cobalt(II) complex  $[\text{Co}(\text{CN})_6]^{4-}$ . Comment on the nature of the ground state and the spin-allowed transitions expected
- [14]
- c) Complete and balance the following reactions:

[6]

### Question Six

- a) With the help of the flow-chart (decision tree) which is provided, determine the point group for each of the following:

iv)  $d_{xy}$  orbital (whose shape is sketched below)

[12]

b) Determine the symmetries of M-Cl **stretching modes** for the six-coordinate complex  $[MCl_5(O)]$  (which has  $C_{4v}$  point group and whose sketch is given below). Which of the modes are IR active? Which ones are Raman active?

[13]

# PERIODIC TABLE OF THE ELEMENTS
