

UNIVERSITY OF ESWATINI

MAIN EXAMINATION 2020/2021

TITLE OF PAPER: **ADVANCED INORGANIC
CHEMISTRY**

COURSE NUMBER: **C401**

TIME ALLOWED: **THREE (3) HOURS**

INSTRUCTIONS: **THERE ARE THREE (3) SECTIONS:
SECTION A, SECTION B AND
SECTION C. ANSWER ALL THE
QUESTIONS IN SECTION A AND ONE
(1) QUESTION FROM EACH OF THE
SECTIONS B AND C.**

**SECTION A IS WORTH 40 MARKS
AND EACH QUESTION IN SECTIONS
B AND C IS WORTH 30 MARKS.**

**A PERIODIC TABLE AND OTHER USEFUL DATA HAVE BEEN
PROVIDED WITH THIS EXAMINATION PAPER.**

**PLEASE DO NOT OPEN THIS PAPER UNTIL AUTHORISED TO
DO SO BY THE CHIEF INVIGILATOR.**

SECTION A (COMPULSORY)

QUESTION ONE [40 Marks]

(a) (i) Give the electron count for each metal centre of the following species:

- (1) $\text{Ir}(\text{CO})(\text{NO})(\text{PPh}_3)_2$
- (2) $[\text{PtCl}_3(\eta^2\text{-H}_2\text{C}=\text{CH}_2)]^-$
- (3)

[3]

(ii) Assign the oxidation state of each metal, M. Assuming the 18-electron rule applies, identify the second row transition metal.

- (1) $[(\eta^5\text{-C}_5\text{H}_5)(\eta^4\text{-C}_5\text{H}_6)\text{M}]^+$
- (2) $[\text{M}(\text{CO})_3(\text{PMe}_3)]^-$
- (3) $(\eta^5\text{-C}_5\text{H}_5)(\eta^1\text{-C}_3\text{H}_5)(\eta^3\text{-C}_3\text{H}_5)_2\text{M}$ (16-electron complex) [6]

(iii) What charge, z, would be necessary for $[(\eta^3\text{-C}_3\text{H}_5)\text{V}(\text{CNMe})_5]^z$ to obey the 18-electron rule? [1]

(b) (i) Suggest products in the following reactions, and give likely structures for the products:

- (1) $\text{Fe}(\text{CO})_5$ irradiated with C_2H_4
- (2) $\text{Re}_2(\text{CO})_{10}$ with Na/Hg
- (3) $\text{Ni}(\text{CO})_4$ with PPh_3 [6]

(ii) Rationalise the observation that on going from $\text{Fe}(\text{CO})_5$ to $\text{Fe}(\text{CO})_5(\text{PPh}_3)_2$, absorptions in the IR spectrum at 2025 and 2000 cm^{-1} are replaced by bands at 1944, 1886 and 1881 cm^{-1} . [4]

(c) (i) Sketch the products of the reaction when the following complex loses
(1) one PPh_3 (2) one CO [4]

(ii) Draw the structures of the three complexes $(\text{cyclo-C}_7\text{H}_7)\text{Co}(\text{CO})_n$ ($n = 1, 2$ and 3) assuming that the complexes obey the 18-electron rule. [6]

- (d) (i) Sketch interactions of 1,3-butadiene, ($\text{CH}_2=\text{CH}-\text{CH}=\text{CH}_2$) with a metal atom via
- (1) η^2
 - (2) η^4
- [4]

- (ii) There is *one oxidative addition* reaction and *one reductive elimination* reaction in the figure below. Give balanced chemical equations for them (both) and assign oxidation numbers to all the rhodium complexes in the equations.
- [6]

The main catalytic cycle in the homogeneous hydrogenation of alkene by rhodium-phosphine complexes, $\text{L} = \text{PPh}_3$.

SECTION B (ANSWER ANY ONE QUESTION)

QUESTION ONE [30 Marks]

- (a) (i) Predict the product of the following reaction and show the structure. Note that the product includes all the atoms of the original complex and of the PMe_3 . Describe in as much detail as you can its $\nu(\text{CO})$ IR spectrum. [6]

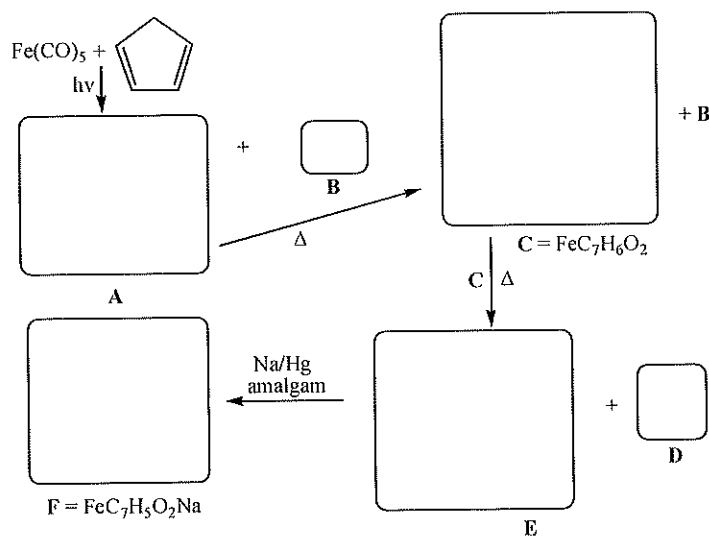

- (ii) The M–P distance in $(\eta^5\text{-C}_5\text{H}_5)\text{Co}(\text{PET}_3)_2$ is 221.8 pm and the P–C distance is 184.6 pm. The corresponding distances in $[(\eta^5\text{-C}_5\text{H}_5)\text{Co}(\text{PET}_3)_2]^+$ are 223 pm and 182.9 pm. Account for the changes in these distances as the former complex is oxidised. [4]
- (b) (i) Inspect the catalytic cycle below. Give the species in the two boxes (marked with “?”) and describe each of the steps A–D in as much detail as possible. [8]

- (ii) Which of the following constitute genuine examples of catalysis and which do not? Justify your answers.
- (1) The addition of H_2 to C_2H_4 when the mixture is brought into contact with finely divided platinum.
 - (2) The combination of N_2 gas with lithium metal to produce Li_3N , which then reacts with H_2O to produce NH_3 and LiOH . [4]
- (c) Propose two syntheses for $\text{MeMn}(\text{CO})_5$ both starting with $\text{Mn}_2(\text{CO})_{10}$, with one using Na and one using Br_2 . You may use other reagents of your choice. [8]

QUESTION TWO [30 Marks]

- (a) Propose the main steps in the catalytic cycle for the conversion of pent-1-ene to hexanal using $\text{HRh}(\text{CO})_4$ as the catalyst precursor. [8]
- (b) (i) The product of reaction between PtCl_2 and CO at high pressure and 200°C has a molecular weight of 322. Find the formula and suggest possible isomers. [6]
- (ii) Write balanced equations for the following reaction types:
- (1) $(\text{CH}_3\text{CH}_2)_3\text{Ga} + \text{CH}_3\text{OH} \rightarrow$
 - (2) $\text{Al}_2(\text{CH}_3)_6 + \text{N}(\text{C}_2\text{H}_5)_3 \rightarrow$ [4]
- (c) Irradiating $\text{Fe}(\text{CO})_5$ with UV light in the presence of cyclopentadiene results in the formation of **A** and colourless gas **B**. **A** has four different ^1H NMR environments in a 2:2:1:1 ratio. Heating **A** further results in the release of more **B** to make **C**, having the formula $\text{FeC}_7\text{H}_6\text{O}_2$. Molecule **C** reacts rapidly with itself at room temperature to eliminate colourless gas **D**, forming solid **E**. Compound **E** has two strong IR bands, one near 1850 cm^{-1} , the other near 2000 cm^{-1} . Treatment of **E** with Na metal generates solid **F** of empirical formula $\text{FeC}_7\text{H}_5\text{O}_2\text{Na}$. Draw structures of **A** to **F** indicated by the boxes in scheme below. [12]

QUESTION THREE [30 Marks]

- (a) (i) Explain the following: The *cis* isomer of $(PPh_3)_2Pd(CH_2CH_3)_2$ decomposes immediately to give butane, but the *trans* isomer produces a 1:1 mixture of ethene and ethane. [4]
- (ii) $Ru(CO)_3L_2$, where $L = PPh_3$ reacts with CH_3I as shown:

$$Ru(CO)_3L_2 + CH_3I \rightarrow cis-Ru(CO)_2(L_2)(CH_3)(I) + CO$$
 The product features CH_3I oxidatively added *cis* (C and I have very similar electronegativities). The reaction mechanism involves two steps.
 (1) After counting the electrons in $Ru(CO)_3L_2$, what is the first step in the mechanism?
 (2) What is the second step?
 (3) Sketch the transition state in the second step. [6]
- (b) Examine the scheme below ($L =$ phosphine i.e. PR_3). Give appropriate structures and give electron counts and oxidation states for all palladium complexes. Name reactions **A**, **B**, **C** and **D**. [10]

- (c) Suggest a plausible mechanism for the following reaction: [10]

SECTION C (ANSWER ANY ONE QUESTION)

QUESTION ONE [30 Marks]

(a) Identify isotopes A – F in the following sequence of nuclear reactions:

- (b) (i) Metal-Metal bonding in multinuclear species is not always clear-cut. *Solely on the basis of the 18-electron rule*, suggest whether $(\eta^5\text{-C}_5\text{H}_5)\text{Ni}(\mu\text{-PPh}_2)_2\text{Ni}(\eta^5\text{-C}_5\text{H}_5)$ might be expected to contain a metal-metal bond. [3]
- (ii) Considering the bonding in metal carbonyls, what factors would affect the C-O stretching vibrations? [3]
- (iii) A carbonyl complex has linear OC-M-CO group. How will the CO stretching frequency change (increase, decrease or remain the same) when one CO is replaced by triethylamine, $(\text{CH}_3\text{CH}_2)_3\text{N}$? Justify your answer. [2]

(c) Suggest what change in cluster structure might accompany the reaction:
 $[\text{Co}_6(\text{CO})_{15}\text{N}]^- \rightarrow [\text{Co}_6(\text{CO})_{13}\text{N}]^- + 2\text{CO}$ [6]

(d) Suggest products for the following reactions.

- (e) Which of the following reactions A-F are oxidative additions? Justify your answers. [6]

QUESTION TWO [30 Marks]

- (a) Use Wade's rules to suggest likely structures for
- (i) B_5H_9 [3]
 - (ii) $[B_8H_8]^{2-}$ [3]
 - (iii) $[Os_8(CO)_{22}]^{2-}$ [3]
- (b) Pick out pairs of isoelectronic species from the following list:
HF, $[NO_2]^+$, NH_3 , $[H_3O]^+$, $[OH]^-$, CO_2 [3]
- (c) (i) Which Ln^{3+} ion would you expect to show the same colour as
(1) Tb^{3+} (2) Tm^{3+} (3) Sm^{3+}
Justify your answers. [5]
- (ii) Give a definition of a *metal cluster*. [1]
- (iii) What are the two broad classes of *metal carbonyl clusters*? [1]
- (d) Predict the structures of
- (i) $[ICl_4]^-$ [3]
 - (ii) $[BrF_2]^+$ [3]
 - (iii) $BrICl^-$ [3]
- (e) Identify the starting isotopes **A** and **B** in each of the following syntheses of transactinoid elements:
- (i) $A + {}^4_2He \rightarrow {}^{256}_{101}Md + {}^1_0n$ [1]
 - (ii) $B + {}^{16}_8O \rightarrow {}^{255}_{102}No + 5({}^1_0n)$ [1]
