

**UNIVERSITY OF SWAZILAND  
MAIN EXAMINATION 2005/6**

**FACULTY OF SCIENCE**

**DEPARTMENT OF ELECTRONIC ENGINEERING**

**TITLE OF PAPER:** TELECOMMUNICATIONS SYSTEMS,  
OPTICAL AND MICROWAVE  
TRANSMISSION

**COURSE CODE:** ECO530

**TIME ALLOWED:** THREE HOURS

---

**INSTRUCTIONS:**

- 1) There are FIVE questions in this paper. Answer QUESTION 1 plus any OTHER THREE questions.
  - 2) Each question carries 25 marks
  - 3) Marks for different sections are shown on the right hand margin.
- 

***THIS PAPER IS NOT TO BE OPENED UNTIL PERMISSION  
HAS BEEN GIVEN BY THE INVIGILATOR***

**This question paper has 6 pages including this page and 10 pages of Erlang tables**

### **QUESTION 1 (Compulsory)**

- a. The UT-100 follows the basic architecture of a digital switch. Draw a block diagram of a generic digital switch and list the 8 basic functions expected from a digital switch. (10 marks)
- b. Show your understanding of switching by explaining the difference between the following:
- a. Analogue switch and a digital switch (1 mark)
  - b. Circuit switching and packet switching (1 mark)
  - c. A space switch and a time switch. (1 mark)
  - d. In addition, draw a diagram of a S-T-S switch. (1 mark)
- c. Draw a block diagram of the PIU in the UT-100 exchange and answer the following questions:
- a. How many PIU are in an M2 module?
  - b. Calculate the number of ports that a PIU can handle.
- (6 marks)
- d. A 10-MHz analogue signal is to be digitised for transmission over a digital link using advanced encoding techniques and 8 bits per sample European standard. What is the transmission rate? (5 marks)

## QUESTION 2

- a. During the busy hour, 1200 calls were offered to a group of trunks & six calls were lost. The average call duration was 3 min. Find
  - (i) Traffic offered
  - (ii) Traffic carried
  - (iii) GoS
  - (iv) Total duration of the periods of congestion

(8 marks)
- b. A 4-node transmission ring is to be created to protect the 4 nodes. The traffic between node 1 & all other nodes warrants at least 4000 circuits and the traffic between all other nodes warrants less than 2000 circuits. Draw a diagram of your proposed ring and justify the capacities.

(6 marks)
- c. Draw a cross-section of a twelve core optic fibre cable, single mode, 1310 nm. Label it and explain what losses are expected for a 60 km link.

(4 marks)
- d. If the refractive indexes are given as  $n_1 = 1.457$  and  $n_2 = 1.343$ , calculate and demonstrate the location of each angle:
  - (i) Critical angle
  - (ii) The acceptance angle
  - (iii) The numerical aperture

(7 marks)

### **QUESTION 3**

- a. With the aid of a diagram, describe the ISDN reference model as prescribed in ITU-T Recommendations I.411 and I.430 by providing the configuration of ISDN user-network. (9 marks)
- b. Give the structure of ITU No. 7 signalling which is compatible with ISDN and explain the function of each level. (7 marks)
- c. Give two main reasons why channel associated signalling is not compatible with ISDN. (4marks)
- d. Name and describe the functionality found within the three service categories of the ISDN network and give 2 examples in each category. (5 marks)

#### **QUESTION 4**

- a. What are the terrestrial propagation models used in the design of line-of-sight systems. Which one is generally used and why? (5 marks)
- b. If a transmitter has an output of 1 W, the feeder loss is assumed to be 3dB and the dish is 2.4 m operating at 3 GHz, what will be the EIRP? (5 marks)
- c. A-70 km hop operating at 3 GHz is to be implemented using a microwave system. Assuming transmitter power of 1 watt and total feeder loss of 6dB, the required minimum received signal level is  $-70\text{dBW}$  with a fade margin of 10dB. What will be the total antenna gain for the link? (9 marks)
- d. A satellite link is operating a QPSK modem to transmit a TDMA signal at 120Mb/s. The modem is within 2.5 dB of the theoretical QPSK modem. Due to other system impairments, an additional 1.6 dB degradation in performance exists. Determine the required  $E_b/N_0$  and C/N if the theoretical  $E_b/N_0=11.5\text{dB}$  (to maintain the required system performance) (6 marks)

## **QUESTION 5**

- (a) Give the general structure of a cellular public land mobile network (PLMN) as standardized by the ITU. And explain the function of each component. (10 marks)
- (b) Given that a cellular mobile network is based on the 7 cell cluster pattern (operating in the 900 MHz band), calculate:
- i The mean re-use distance ratio, (2 marks)
  - ii The carrier to interference ratio (C/I). (2 marks)
  - iii Explain why frequency reuse is implemented in cellular networks. (2 marks)
- (c) Given that a micro cell GSM 900 network is designed based on three RF carriers/cell, each cell is  $500\text{m}^2$ , and that each user generates 0.3 Erlangs. How many users per square kilometre may be served by the network:
- i Assuming a 0.002 grade of service
  - ii Assuming a 0.01 grade of service(Erlang B table is provided)
  - iii Explain the difference between (i) and (ii) in terms of number of circuits required.
- (9 marks)

*==== END OF QUESTION PAPER, TRAFFIC CAPACITY TABLES FOLLOW ====*

TRAFFIC CAPACITY TABLE  
Full Availability

(ERLANG B)
